

K9 Agent — Process Design Map

Retail_Agentic_Commerce_LiviuGhenghea · DA Direkt Dog Insurance · Zurich Hyper Challenge 2026

LAYER 1 — CUSTOMER AGENT

claude-haiku-4-5

Acts on behalf of the dog owner. Holds the owner profile (name, address, DOB, IBAN) and dog profile (breed, DOB, gender). Drives the conversation: introduces the dog, asks about plans, evaluates options, asks about exclusions and waiting periods, provides owner details on request, and gives explicit purchase consent.

↑ *Natural language messages (turn-by-turn)*

LAYER 2 — ZURICH K9 AGENT (Orchestrator)

claude-sonnet-4-6

Receives messages, decides which tools to call, executes them, appends results to conversation history, loops until a text response is ready. Owns the lead UUID and full conversation state. Enforces consent before bind. Never calls bind_coverage until check_missing_fields confirms all required fields are present.

Agentic loop: receive message → call Claude API → if tool_use: execute tools + loop → if end_turn: return response

↑ *Tool calls via httpx (live REST APIs)*

LAYER 3 — 12 TOOLS

tool_use

RESEARCH & FAQ

search_breeds

Resolve breed name → breed_id

get_all_plans

List all 6 coverage options

get_plan_details

Plain-language plan description

get_coverage_faq

Waiting periods, GOT, exclusions

get_available_start_dates

Valid contract start dates

PRICING

get_price

Price a single plan

get_all_prices

Full comparison across all plans

LEAD LIFECYCLE

create_lead

Open a new lead in DA Direkt

update_lead

Progressively enrich lead data

get_lead

Retrieve current lead state

check_missing_fields

Validate before bind

bind_coverage

Submit insurance application

LAYER 4 — PETOLO BETA APIs · <https://beta.dentolo-test.de> · Auth: x-api-key header

REST/JSON

Breeds API

GET /v1/breeds

Policies API

GET /v1/policies

Price API

GET /v1/price

Leads API
POST/PUT/GET
/v1/leads

Recurring

GET /v1/contracts/
available_start_dates

JOURNEY FLOW (non-linear — any step can loop back to ask questions)

1 RESEARCH	2 QUOTE	3 COLLECT	4 VALIDATE	5 CONFIRM	6 BIND
Customer asks about plans and coverage differences	Agent calls get_all_prices + search_breeds	Customer provides owner + dog data + IBAN	check_missing_fields() verifies readiness	Agent shows full summary + explicit consent required	bind_coverage() Application submitted ✓
